Ohoskin® and Sonus faber together for a new concert of sustainability and design: Introducing the Concertino G4

Catania – **Ohoskin®**, the Italian startup that has patented an alternative textile material to animal leather, celebrates a new partnership with prestigious high-end audio brand **Sonus faber** for the launch of the **Concertino G4** speaker.

This special edition of the legendary Italian speaker marks a meeting point between innovation, craftsmanship, and sustainability. The Concertino G4 features Ohoskin® as the covering for the **front baffle and cork structure**, lending the speaker a refined aesthetic and soft texture, all without compromising on environmental impact.

Ohoskin®, made from orange waste, is the ideal choice for brands that want to incorporate sustainable, vegan materials that are entirely made in Italy.

“The collaboration with Sonus faber highlights Ohoskin®’s versatility and its ability to elevate iconic products through a combination of sustainability and luxury,” said Adriana Santanocito, CEO and Co-Founder of Ohoskin. **“We are proud to contribute to a project that blends tradition and innovation, offering a new experience in both design and listening.”**

“In Ohoskin, we’ve found the perfect partner to drive Concertino’s innovation forward. Using Ohoskin plant-based alternative leather for the front baffle, paired with a recycled cork structure, we’re setting a new standard in luxury audio—delivering exceptional look and performances while making a positive environmental impact.” Livio Cucuzza, VP and Chief Design Officer of Sonus faber.

The first 300 pairs of Concertino G4 will be produced in a limited **Maestro Edition**, numbered and designed for true audiophiles who appreciate sustainable design.
